- ▶ Approach 06

Information Vizalization

Information visualization is the process of representing data in a visual and meaningful way so that a user can better understand it. Dashboards and scatter plots are common examples of information visualization. Via its depicting an overview and showing relevant connections, information visualization allows users to draw insights from abstract data in an efficient and effective manner.

Problem

01

Who owns what?

02

How much wealth is concentrated?

03

What patterns exist in wealth distribution?

- per institutional holder?
- per economic sector?

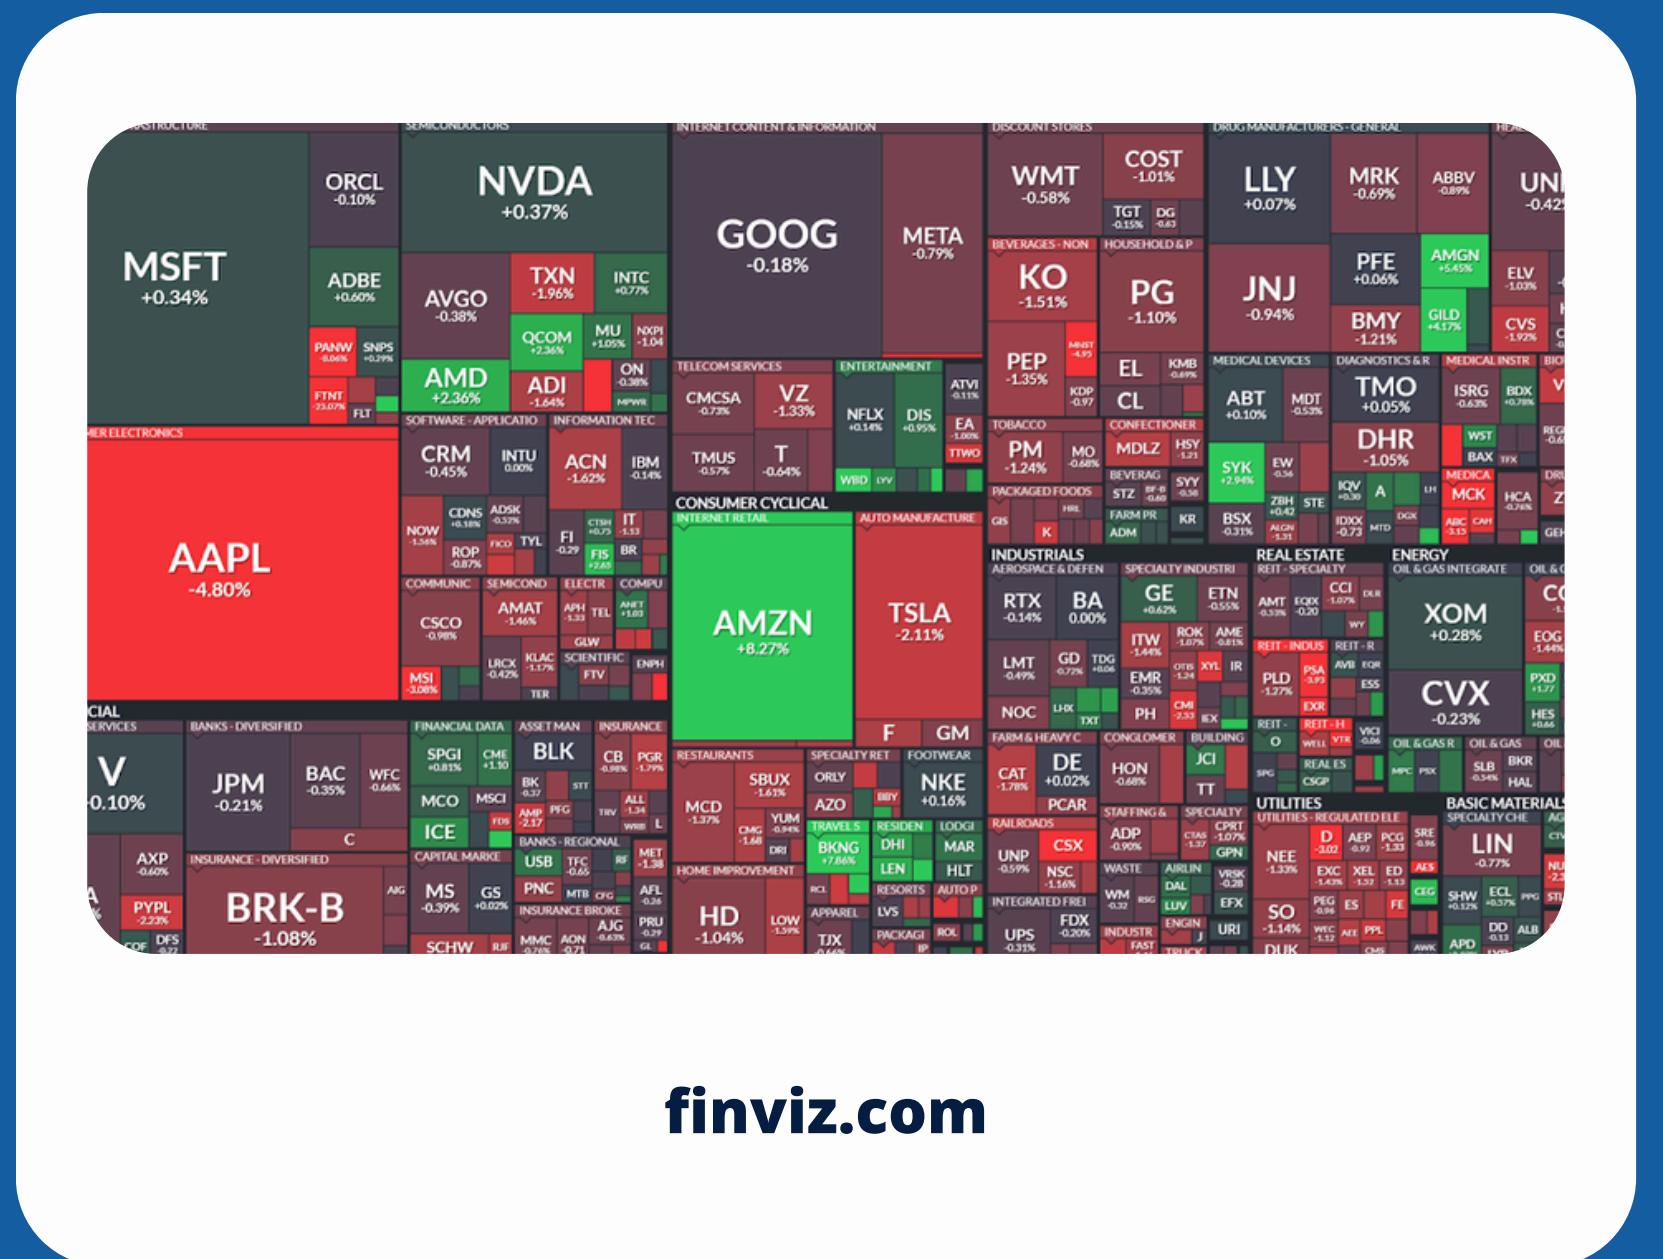

Data

- Sector
- Industry
- Company (symbol)
- Shares
- Percentage
- ect.
